

## TGR EDU: Create STEM Studio One Day Workshop

### Creating Inquiry Minded Environments

Engagement without a connection to discovery may be fun but can leave students in the shallow end of the learning pool. Using an inquiry mindset to build discovery-based lessons with strong content objectives, lead to both high engagement and a connection to higher level learning.

#### Session Topic: What is Inquiry?

Participants will learn how to leverage engagement using an Inquiry based activity that can be customized to your class needs. Participants will also be able to describe the different types of engagement and inquiry, identify key inquiry elements in model activities, and plan for how they can incorporate inquiry into their learning environments.

This workshop is open to all educators looking to enhance their student-centered learning environments and collaborate with other like-minded peers in the TGR EDU: Create community.

### WHO

Third through 12th grade educators who want to establish an environment for inquiry based learning in their classroom.

### WHEN

Saturday, March 7, 2020

9:00 am - 3:00 pm

8:30 am Breakfast & Check-in

9:00 am Program Begins
